

Startup Surakshate

Security First. Growth Always.

To protect startups from cyber threats from Day Zero, ensuring trust, growth, and resilience in an increasingly dangerous digital landscape.

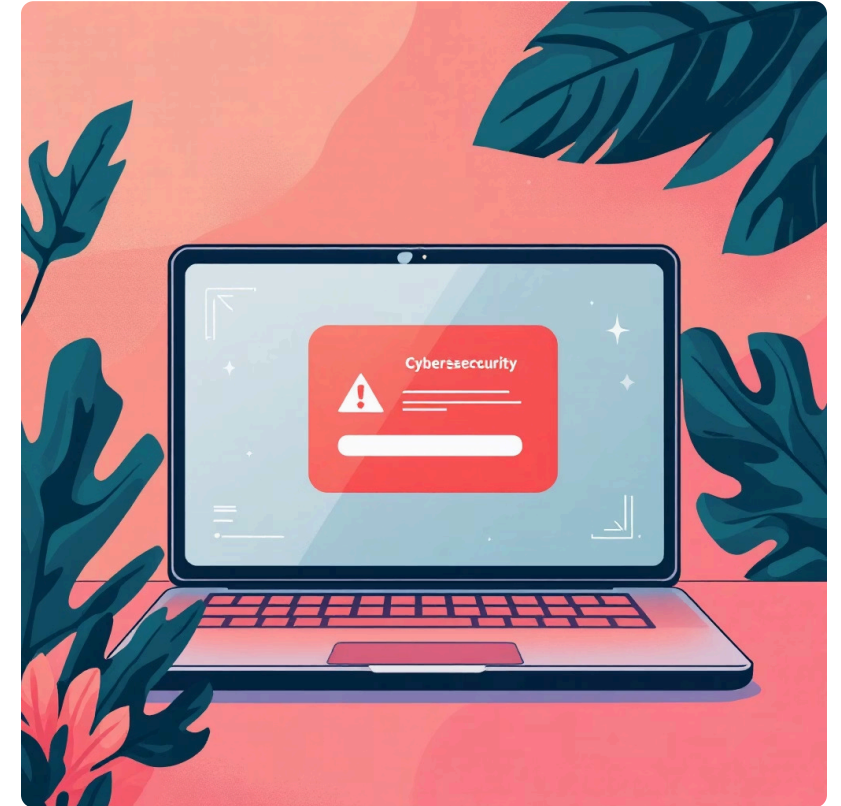

The Cybersecurity Crisis Facing Startups

Startups Are Under Siege

The statistics are alarming: 95% of cyberattacks target SMEs and startups, yet most lack adequate protection. Current enterprise security tools are expensive, complex, and built for large corporations—not agile startups.

- Phishing attacks exploit employees as the weakest link
- Security concerns cause investor distrust and funding delays
- One breach can destroy years of hard work

Introducing Startup Surakshate

Our AI-powered SaaS Security Suite is specifically designed for startups—affordable, automated, and startup-friendly from day one.

Startup Guardian

Real-time scanning of codebases, websites, and APIs with intelligent threat detection powered by advanced AI algorithms.

PhishBuster

Detects sophisticated phishing attempts and provides gamified employee training to turn your team into your strongest defense.
